BUSINESS INTELLIGENCE & ANALYTICS PORTFOLIO

Sales Performance Analysis

Business Insights Report

1. PROJECT OVERVIEW

This project analyzes sales data using SQL Server and Power BI to evaluate business performance, identify sales trends, and generate actionable insights. The analysis focuses on revenue, costs, profitability, product performance, customer behavior, and regional sales.

2. KEY PERFORMANCE INDICATORS (KPIS)

KPI	Value
Total Revenue	**17.42M**
Total Cost	**7.03M**
Total Profit	**10.39M**
Profit Margin	**59.66%**
Total Quantity Sold	**Approximately 4K**

3. BUSINESS INSIGHTS

Revenue and Profitability

- Total revenue reached approximately 17.42M.
- Total profit was approximately 10.39M, compared with a total cost of 7.03M.
- The overall profit margin was approximately 59.66%.
- Monitoring revenue, cost, and profit together helps assess the company's financial performance.

Product Performance

- Revenue by product category helps compare the contribution of each category to total sales.
- The Top 10 Products analysis highlights the products generating the highest revenue.
- Comparing product revenue and cost can help identify opportunities to improve profitability.

Regional Performance

- Revenue by region helps identify markets with stronger sales performance.
- Regional comparisons can support decisions about marketing activities and resource allocation.

Customer Analysis

- Sales by gender provides an overview of purchasing patterns across customer segments.
- The Top 10 Customers analysis helps identify customers who contribute significantly to revenue.

3. BUSINESS INSIGHTS (CONTINUED)

Sales Trends and Purchasing Behavior

- Monthly sales analysis helps track changes in revenue over time.
- Sales channel analysis shows how different channels contribute to total revenue.
- Payment method analysis helps understand customer payment preferences.

4. BUSINESS RECOMMENDATIONS

1. Focus on products and categories that generate strong revenue and profitability.
2. Monitor costs regularly to protect profit margins.
3. Investigate regional differences to identify opportunities for sales growth.
4. Develop customer retention strategies for high-value customers.
5. Use monthly sales trends to improve inventory planning and marketing decisions.
6. Monitor the Power BI dashboard regularly to support data-driven decisions.

5. TOOLS AND TECHNOLOGIES

SQL Server Data querying, calculations, and analysis.	**Power BI** Interactive dashboard and data visualization.	**CSV Files** Data storage and exchange.

6. CONCLUSION

This project demonstrates how SQL Server and Power BI can be used together to transform sales data into meaningful business insights. The dashboard provides an overview of key performance indicators and enables users to explore sales performance across products, regions, customers, time periods, sales channels, and payment methods.

The findings can support better business decisions by improving visibility into revenue, costs, profitability, and customer purchasing behavior.
